SCULPTOR

# WAX FOR EPILATION

- Perfect for thin and stiff hair (both fluff and bristle hair), sensitive skin and delicate areas
- Dermatologically tested

Made in Italy 🇮🇹
Waist: 500 g

# THE BENEFITS OF EPILATION WITH FLEXION WAX

## UNIVERSALITY IN WORK
applying the wax along the growth of hair or against does not affect the quality of removal of unwanted hair from the body

## SAFETY
minimal chance of traumatizing the skin with wax, even when reapplied to the same area (still recommended to use a talcum powder)

## IT AFFECTS ANY TYPE OF HAIR
it removes both fine (downy) and stiff (bristly) types of hair with the same quality

## EASY TO REMOVE
in case of accidental contact with an unwanted spot, the wax is easily removed with an eyebrow concentrate.

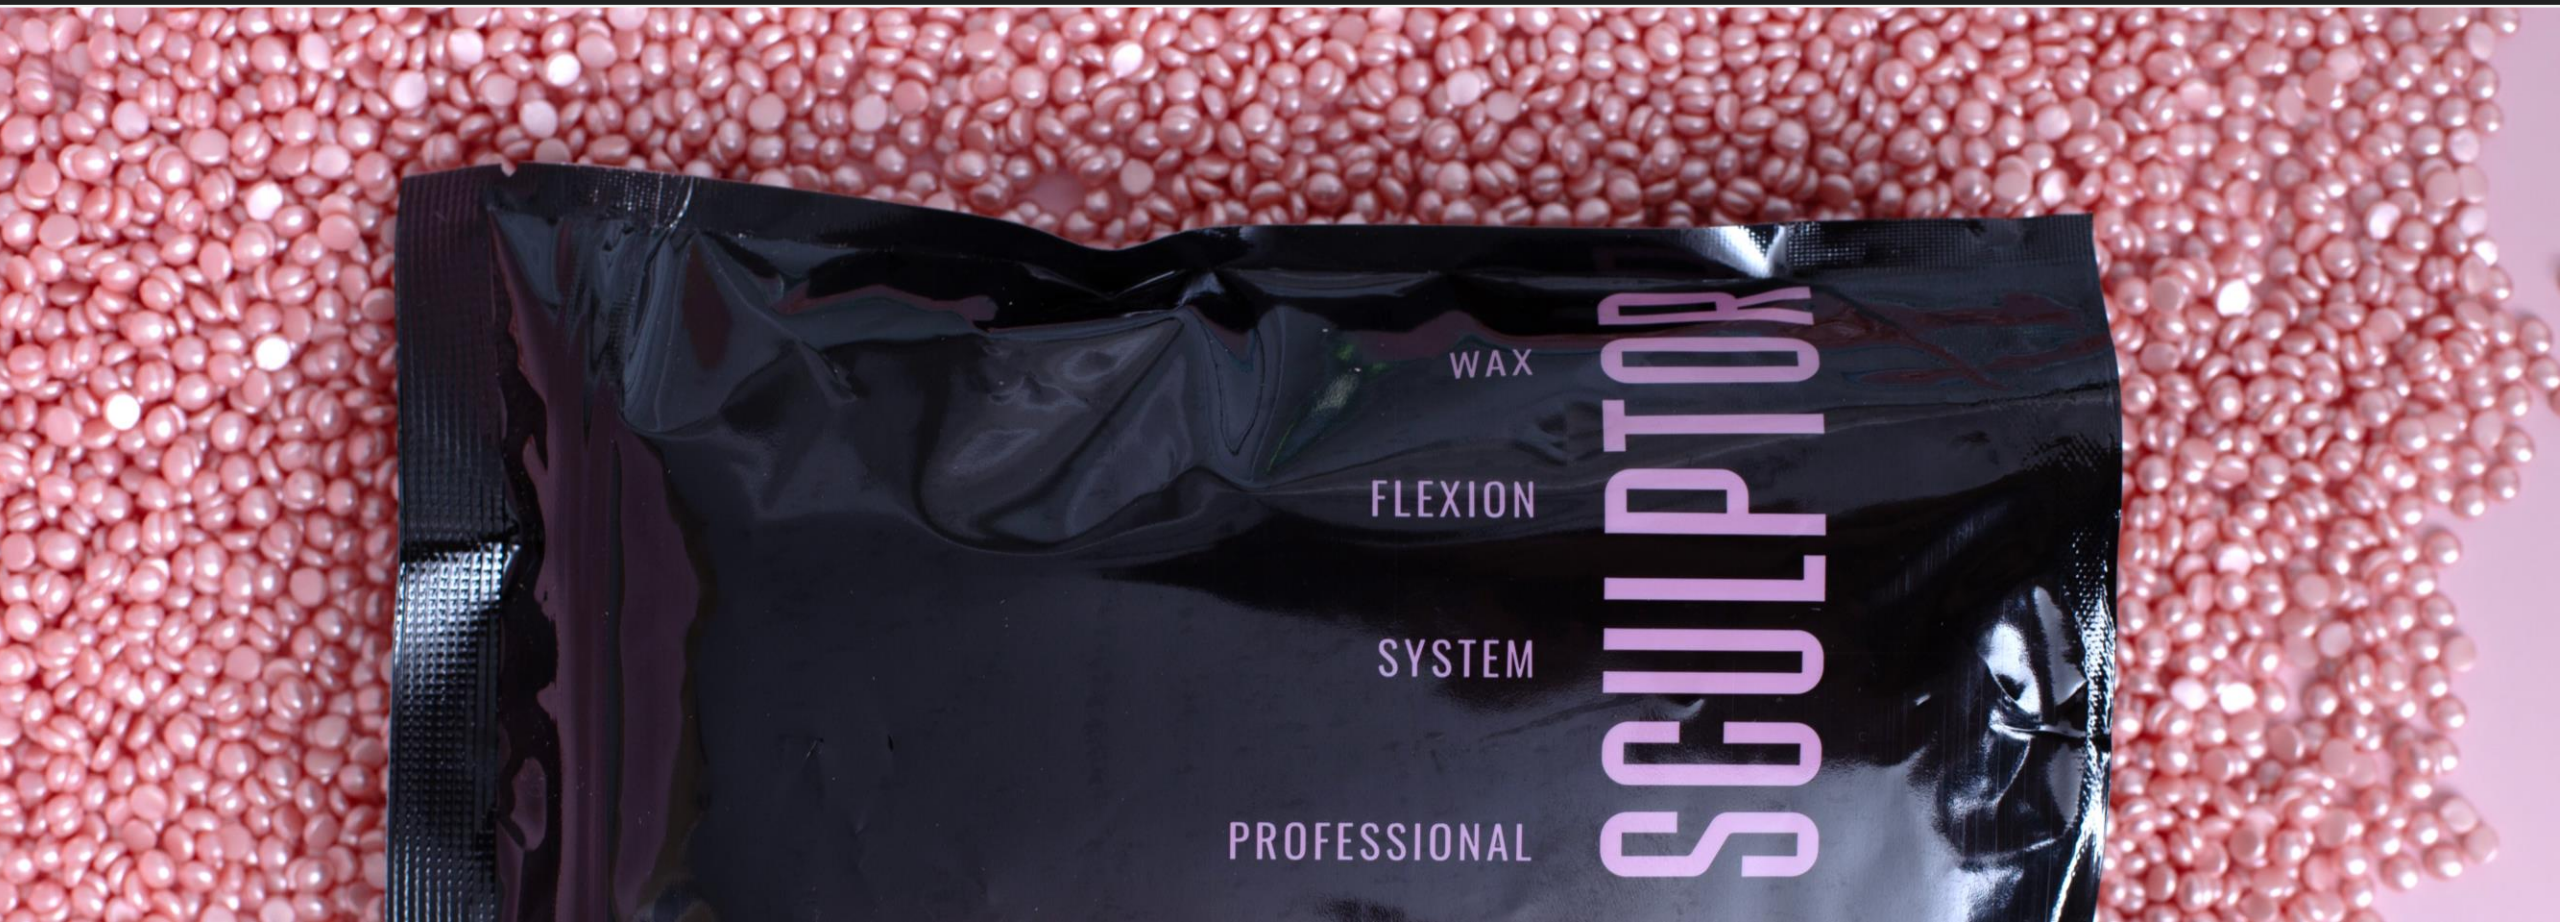

## WORKS WITH DIFFERENT STAGES OF SOLIDIFICATION
it is effective in removing hair both in a solid and plastic state - not every wax is able to work in this way

## A NEUTRAL SMELL
does not have an unpleasant odor of the primary product

## ESTHETIC LOOK
has an incredibly beautiful and expensive pearlescent shade

# THE COMPONENTS

01 02 03 04 05 06 07

# GLYCERYL ROSINATE / TRIETHYLENE GLYCOL ROSINATE

01

These ingredients are derived from natural resin and serve as the base of the wax. They provide strong adhesion to the hairs, allowing even the shortest and finest hairs to be removed from the root, making the epilation process more effective and long-lasting.

# MICROCRYSTALLINE WAX / PARAFFIN

02

These waxes create a smooth and supple texture to the product. Microcrystalline wax improves the plasticity and adhesion of the wax for easy application and removal, while paraffin wax creates a barrier on the skin, preventing it from over-drying.

# CERA ALBA (BEESWAX)

03

Natural moisturizer that softens the skin and reduces skin irritation after epilation. Beeswax has antibacterial properties and helps soothe the skin, preventing inflammation and redness.

# MICA / TITANIUM DIOXIDE

04

These minerals are used to add shine to the wax and ensure even application. Micah gives the skin a slight glow and titanium dioxide protects the skin from UV light, making the epilation process safe even for sensitive skin.

# COCOS NUCIFERA OIL (COCONUT OIL) / RICINUS COMMUNIS SEED OIL (CASTOR OIL)

05

Natural oils that deeply nourish and moisturize the skin, preventing dryness and irritation. Coconut oil has antibacterial and anti-inflammatory properties, while castor oil promotes skin repair and prevents skin damage.

# TOCOPHERYL ACETATE (VITAMIN E)

06

A powerful antioxidant that protects the skin from environmental damage and promotes its recovery after the epilation procedure. Vitamin E accelerates skin healing and prevents irritations.

# TIN OXIDE / PENTAERYTHRITYL TETRA-DI-T-BUTYL HYDROXYHYDROCINNAMATE

07

These ingredients act as stabilizers and antioxidants that help keep the product fresh and effective for a long time. They prevent oxidation and spoilage of the wax, ensuring its longevity.

# HOW TO USE

# 01

Pour the wax granules into a metallic or silicone container.

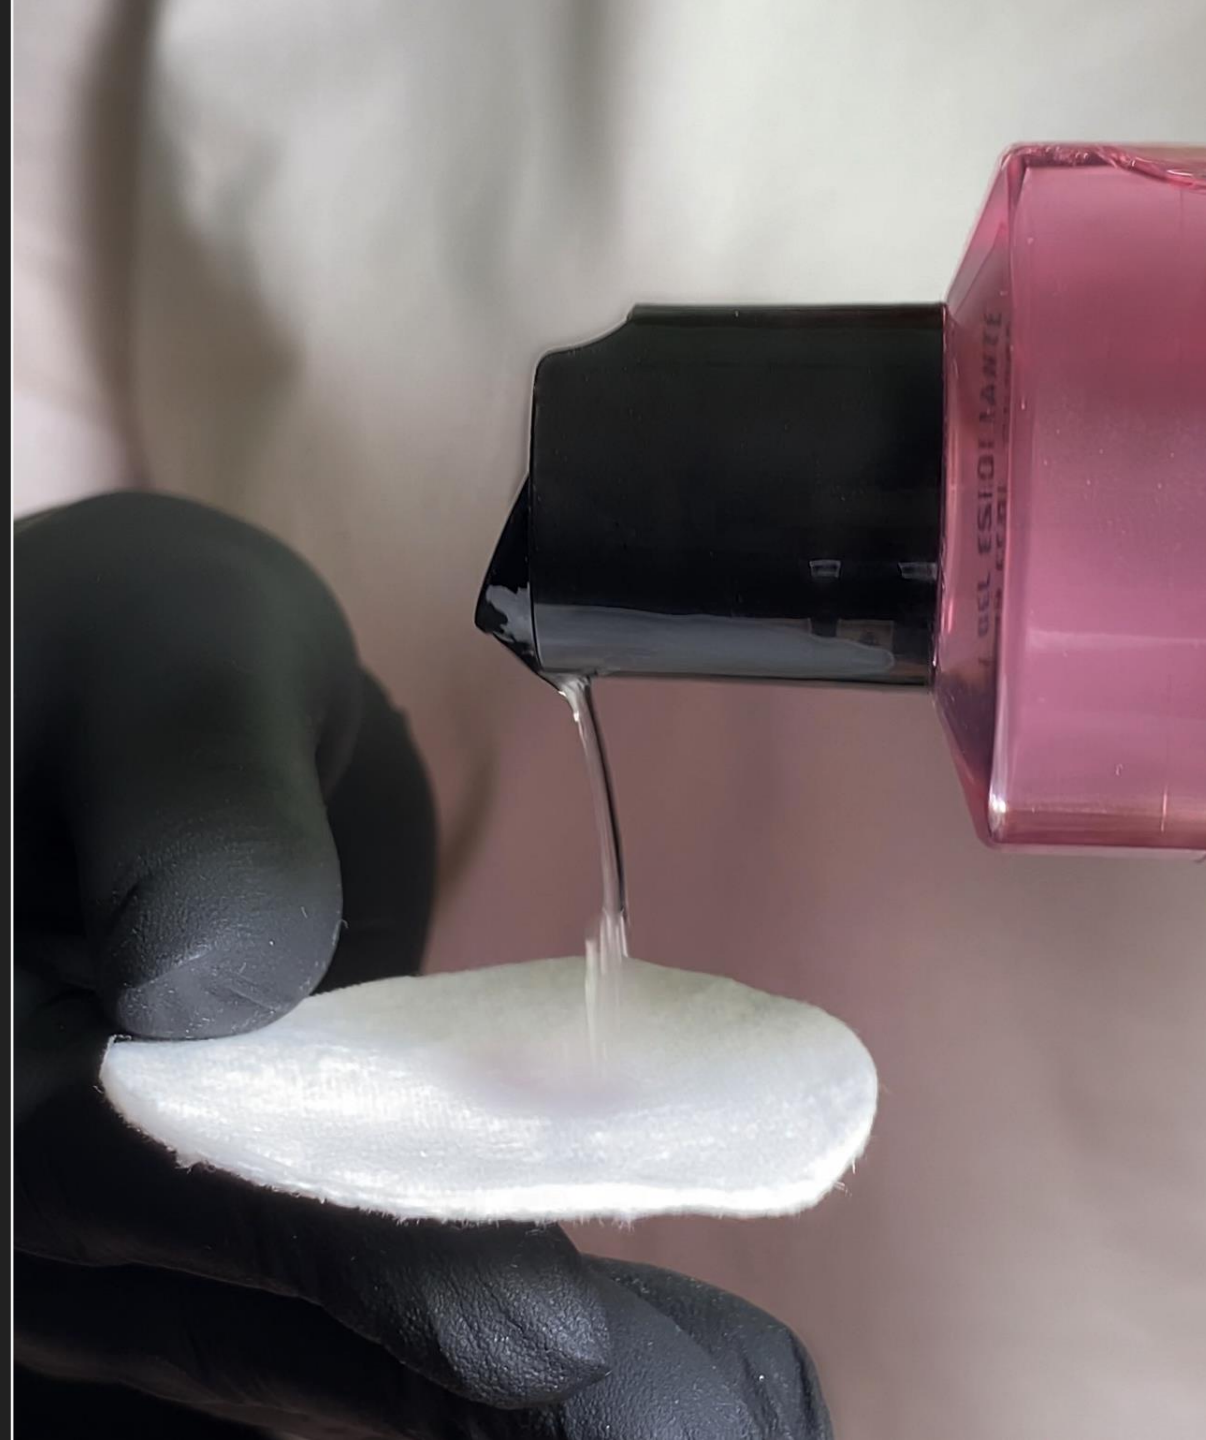

# 02

Set the temperature to 65°C and wait until the wax melts. Then, let the wax cool to a creamy consistency.

# 03

Clean the epilation area. Wait until the skin is completely dry. Apply talcum powder to avoid damaging the upper layer of skin (especially important when dealing with thin and sensitive skin).

# 04

Using a comfortable trowel, apply a little bit of wax. Put the product on a small area of skin to test the temperature.

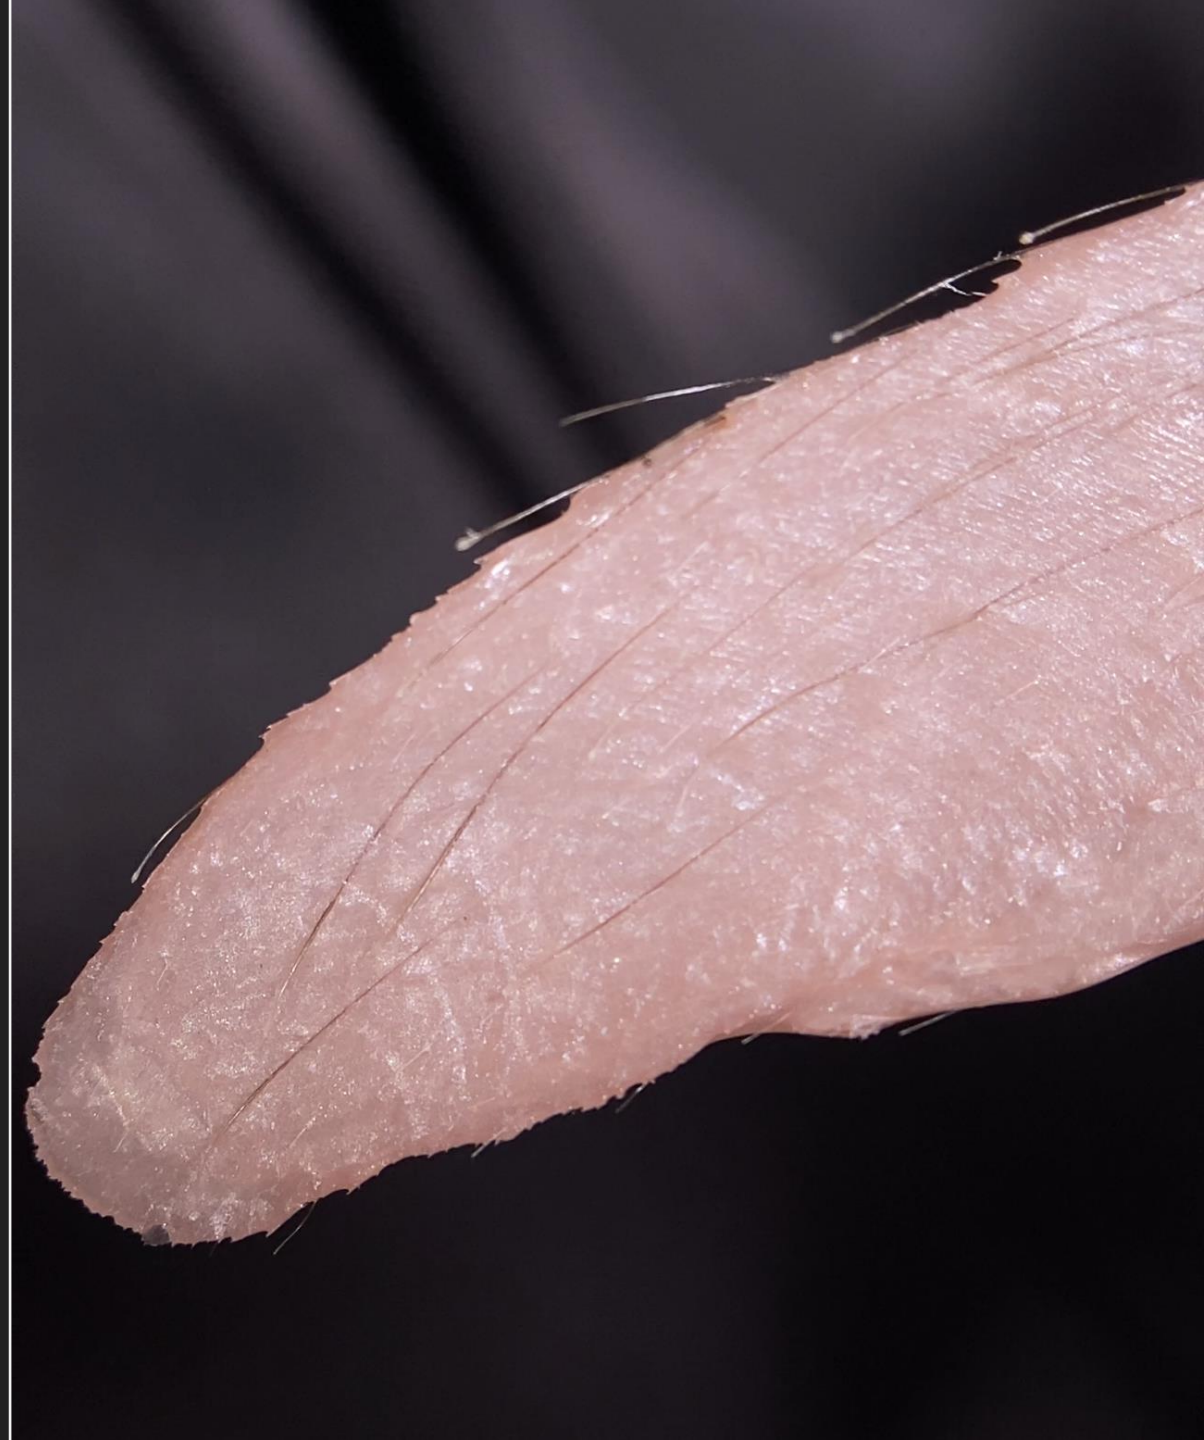

# 05

Spread a sufficient amount of wax on the epilation area.

# 06

Wait for the wax to harden on the skin, pull it tight, and then remove it with a sharp motion in the opposite direction of hair growing.

# 07

After hair removing, clean the residues with a special after waxing oil, moisturize the skin and apply sunscreen to protect against the appearance of pigment spots.

# WILL BE AVAILABLE SOON...

ALSO THE LINE OF CARE PRODUCTS BEFORE AND AFTER EPILATION FROM SCULPTOR WILL BE AVAILABLE SOON

# PRE WAX

01

Lotion for skin treatment before depilation

With a moderate pH level. Provides better adhesion of the wax to the hairs. Is enriched with aloe, which prevents redness of the skin at the end of the procedure.

# SCRUB GEL

02

Ultra-gentle exfoliating gel scrub with aloe

Effectively removes dead cells, leaving the skin soft and silky.

# POST WAX

Refreshing gel after epilation

03

Thanks to the aloe content, moisturizes the skin and prevents redness.

# SCULPTOR

PERFECT SMOOTHNESS WITH CARE FOR THE MOST SENSITIVE ONES
