SCULPTOR

A LONG-AWAITED NOVELTY

BY SCULPTOR

Everyone wants to have beautiful and well-groomed eyebrows.

Properly shaped brows create a special expressiveness of the look and emphasize the uniqueness of each woman.

Surveys have shown that when a girl chooses between emphasizing eyelashes or eyebrows, she is more likely to prefer eyebrows.

Therefore, we are launching a product for brow artists that will provide perfect

brow tinting

WHY DID WE DECIDE TO CREATE A NEW BROW TINT?

OUR GOAL

is to provide our brow technicians
with a premium product that will not:

- darken the hairs
- wash out quickly
- dry out the skin
- give an unpredictable result
- not enough or too much coloring of the skin

VIDEO

The history of creating the sculptor eyebrow gel tint began more than 2 years ago.
We wanted to make a perfect product that could simultaneously meet the needs of brow artists and their clients.

Starting in 2021, Yulia Iskusnykh and technologist Iryna Shelayeva have been testing different samples of eyebrow tint to find the perfect formula. The path was long and difficult, but the result was worth it:
we got what we wanted — high-quality and long-lasting sculptor eyebrow gel tint that has no flaws!

LIGHT BROWN

WARM BROWN

DARK BROWN

MEET THE NEW PRODUCT BY SCULPTOR!

LONG-LASTING EYEBROW GEL TINT IN 4 SHADES:

And a 3% cream oxidizer for gentle and safe tinting

ADVANTAGES OF SCULPTOR EYEBROW GEL TINT

- provides expressive and intense skin tinting
- does not darken hairs
- does not disturb the pH balance of the skin
- does not dry out the skin
- easy to apply due to the gel texture
- easy to layer to increase the intensity of the shade
- perfectly adsorbed by the skin and hairs
- guarantees high-quality brow tinting that lasts up to 6 weeks

CHARACTERISTICS OF SCULPTOR EYEBROW GEL TINT

THE PRODUCT CONTAINS MANY CARE COMPONENTS THAT PROVIDE:

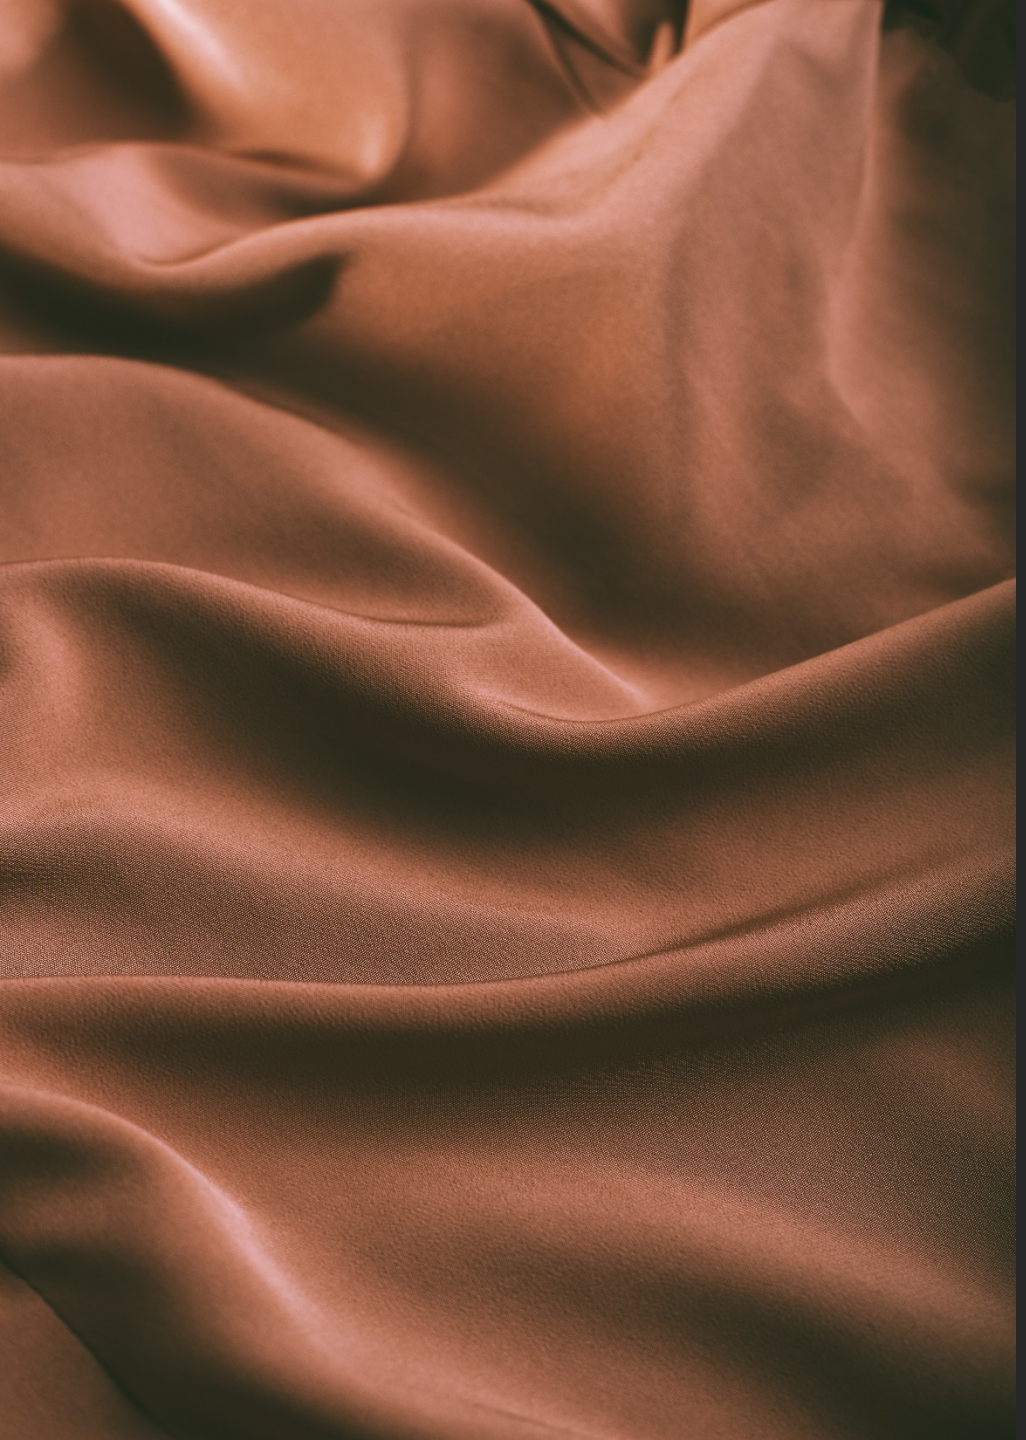

- antioxidant effect
- strengthening and restoration
- hair nutrition
- moisturizing, softening effect
- giving the hair volume
- soothing effect

- The gel structure contains only water-soluble components that contribute to good adsorption of dyes absorbed by hairs and skin.
- Propylene glycol and ethoxydiglycol are the "conductors" of dyes through the epidermal and keratin layers, which increases the intensity of coloring the surface of hairs and skin.
- D-panthenol and PEG-400 are moisturizers and prevent hairs from drying out. Aminomethylpropanol (AMP-95) ensures the preservation of the natural pH balance with minimal damage to the skin and hairs. The combination of colorants and their percentage ratio allows you to get the required range of shades.

PROFESSIONAL EYEBROW GEL TINT BY SCULPTOR PROVIDES AN EXCELLENT RESULT OF TINTING THE EYEBROW HAIRS AND GIVES A SHADE TO THE SKIN.

The product contains

AMINO ACIDS, PEPTIDES, LUCIDS, PROTIDES, LIPIDS AND MINERAL COMPONENTS

The eyebrow gel tint contains silicone, which strengthens the cells of the scalp and hair follicles, preserving their functional properties.

The ingredients also include

HYDROLYZATES OF SILK, KERATIN AND COTTON SEEDS AND BAMBOO SHOOT EXTRACT

- Silk protein hydrolyzate promotes skin and hair follicle regeneration, reduces hair fragility and gives it elasticity
- Due to their small size, silk amino acids penetrate into the hair and quickly integrate into the hair structure, restoring it along the entire length. Silk proteins deeply moisturize hairs and skin
- Cotton seed hydrolyzate is a powerful antioxidant that stops the oxidation process inside the hair. It has a strengthening effect, deeply cleanses the scalp and hair

- Bamboo shoot extract is rich in amino acids and flavonoids. It provides hair with essential vitamins and microelements, strengthens follicles, stimulates collagen synthesis, protects the scalp and hair from the negative effects of chemical ingredients during coloring
- Keratin hydrolyzate ensures penetration of the product deep into the hair, complete restoration of its structure after exposure to chemical irritants. As a result, the hair becomes smooth and has a healthy shine
- Cotton seed hydrolyzate gives the complex moisturizing, nourishing, softening and protective properties

Expiration date:
3 years from the date of manufacture

Shelf life after opening:
3 months

Volume:
eyebrow gel tint - 15 ml,
cream oxidizer - 50 ml

Made in Ukraine

BROW TINTING PROCESSPROTOCOL

WITH EYEBROW GEL TINT BY SCULPTOR

- Thoroughly cleanse the eyebrows with FESTA foam by SCULPTOR
- For more even tinting, exfoliate with scrub gommage. Apply the product to the eyebrows in the direction of hair growth, then go through light dragging movements along the brow line. Remove any residue with a damp cotton pad
- Moisturize with an eyebrow mask. Apply a medium layer of the product for 2-5 minutes (1-2 minutes for oily skin, 3-4 minutes for normal or combination skin, 5 minutes for dry skin). Remove the product residue with a damp cotton pad and wait until the hairs and skin are completely dry
- Make a brow sketch and perform eyebrow correction in any way you like
- Determine the proportions of mixing shades, then mix the tint together with the SCULPTOR oxidizer in a 1:1 ratio. Wait 1-2 minutes for the mixture to oxidize and start applying the tint to the eyebrows. First apply a thin layer of the dye to the skin of the eyebrows, then apply a second layer to the hairs. Important! Do not apply too thick a layer of tint on the eyebrows: this can cause the mixture to flow down, which will cause an uneven lower line
- Maximum exposure time of the tint: 15 minutes. Choose the exposure time depending on the desired result
- After the exposure time has expired, remove the tint from the eyebrows with a damp cotton pad in the direction of hair growth. Remove the product from the eyebrows until the cotton pad is clean
- Wait until the brows are dry, then apply SHIKON POWER CONCENTRATE by SCULPTOR

LIGHT BROWN

Color base: warm

For who: from blondes to dark blondes
Warm skin - the shade is warmer
Cool skin - a neutral shade

To obtain a light brown shade:

1. Add up to 5% of GRAPHITE to the main mass of LIGHT BROWN eyebrow gel tint. Mix the colorants first, and then add the oxidizer in a 1:1 ratio and stir

2. Let it oxidize for 1-2 minutes

3. Apply the tint and oxidizer mixture to the eyebrows

4. Keep for up to 15 minutes depending on the desired shade intensity

OVERVIEW OF THE SHADES OF EYEBROW GEL TINT BY SCULPTOR. TINTING RESULTS.
